Product Installation Guide

Product Range

Glass-fibre reinforced plastic stair nosings - GRPN55/55

Product Description

The GRPN55/55 is a 5.0mm glass-fibre reinforced plastic nosing with a 55mm tread and a 55mm riser. This economical GRP Anti-Slip Stair Nosing is designed for internal and external use and has high slip resistance.

Profiles supplied in stock lengths for cutting on site. Check product Technical Data Sheet for more information.

Important:

If any localised trimming is required, we recommend the use of a jigsaw, preferably fitted with a tungsten carbide blade or alternatively an angle grinder with a diamond tipped cutting disc.

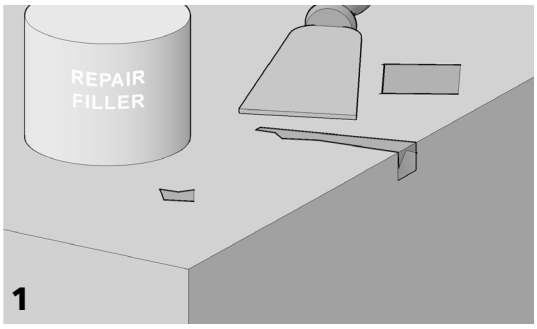

Cutting should be carried out externally, or where there is dust extraction or suitable ventilation. Appropriate protective equipment should be worn.
It is very important to wear PPE Safety Equipment at all times, when working with this Glass-fibre Reinforced Plastic. Recommended safety equipment includes: Eye Goggles/Spectacles, Protective Gloves, Safety Boots, P2 Type Dust Mask, Ear Defenders and Overalls.

For mechanical fixing, CAT recommend using No.8 (4.2mm) x 1.1/4 Inch (32mm) Pozi Self Tapping Flanged Button Screws in Stainless Steel. These fixings can be supplied to Special Order upon customer request.

When fixing GRP nsoings to concrete, use red rawlplugs and a masonry drill bit 5.5mm or 6mm depending on the condition of the concrete substrate, going thorugh the GRP sheet.

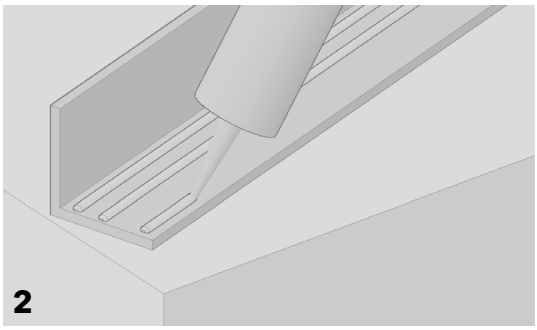

When fixing GRPN55/55 to stainless steel chequer plate, use a 5mm carbide drill bit to drill through the GRPS and a 5mm HHS (high-speed steel) to drill through the chequer plate. Fix the GRP down with a 4.8 rivet.

Adhesive Only Installation:

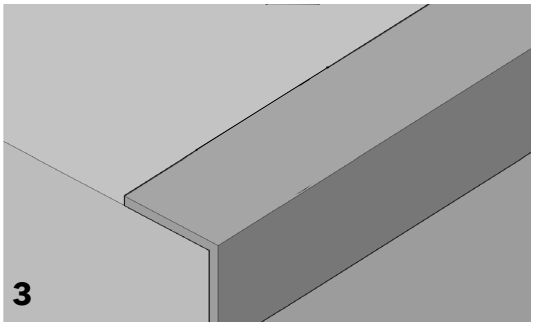

Ensure that the steps are level and in good repair. Any remedial work should be completed in advance of fixing the stair nosings and where this requires wet treatments, these must be allowed to fully cure before commencing the installation.

Always consider dry laying the stair nosings first to ensure they fit properly and evenly.

Ensure the step onto which the nosing is being installed is clean,dry and free from grease.

Apply adhesive* to the underside of the GRP stair nosing, running 2-3 beads of adhesive along the length.

Carefully position the stair nosing and press firmly in to place.

Pedestrian access should only be permitted when the adhesive has had time to fully cure.

CAT *recommends the use of FLEXY FIX to fix any of its extensive range of GRP stair nosings, stair tread nosings and sheet products.
FLEXY FIX is a rapid curing flexible adhesive, excellent at bonding to concrete, wood, metal and steel surfaces, and can be used outside as well as inside.
*subject to following the instructions given by F. Ball and Co Ltd in their FLEXY FIX product technical data sheet, safety data sheet and installation guidelines, available in full from: www.f-ball.com

Product Installation Guide

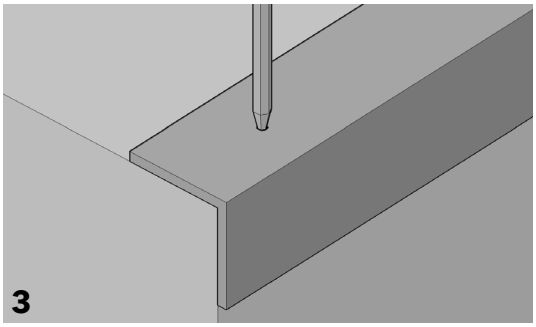

Mechanical Only Installation:

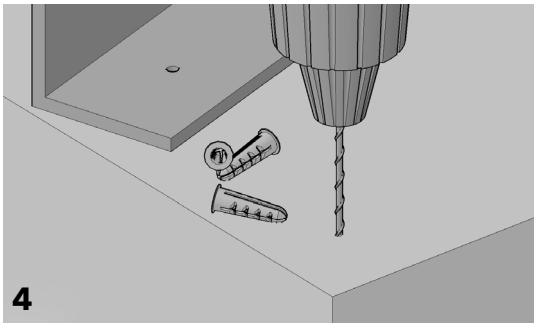

Ensure that the steps are level and in good repair. Any remedial work should be completed in advance of fixing the stair nosings and where this requires wet treatments, these must be allowed to fully cure before commencing the installation.

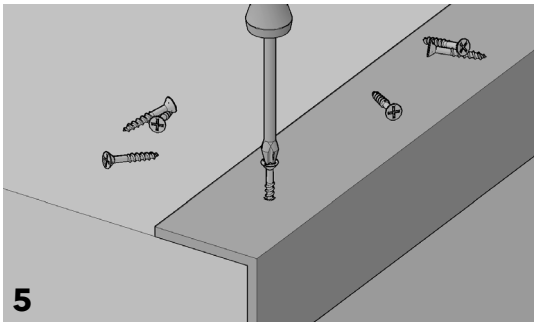

Drill holes along the length of the stair nosing. The fixing points for GRP Stair Nosings need to start at either end of the Stair Nosing with additional fixings points approximately every 600mm.

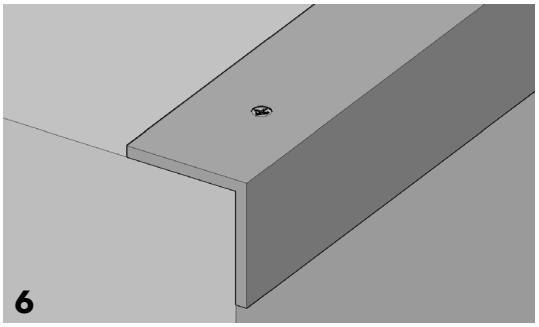

Fit the riser covering (where applicable) before placing the stair nosing profile onto the step to mark off the position of the holes.

Drill according to the substrate, drill holes for plastic plugs in solid surfaces.

Return the stair nosing profile to the step edge, align with the drilled holes and secure with screws.

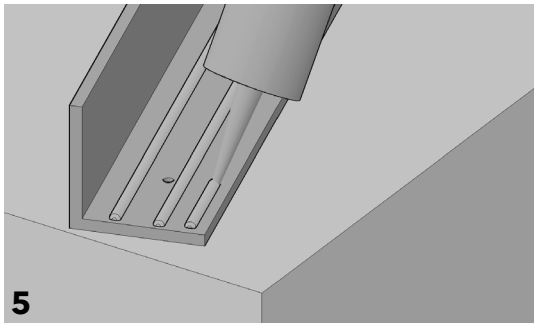

Ensure that the screw heads are flush with or below the stair nosing tread surface.

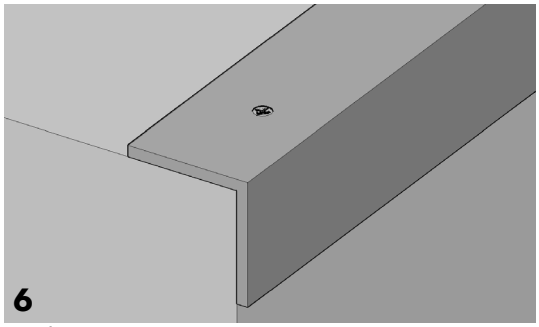

Adhesive and Mechanical Installation:

Generally, adhesive should be enough to secure GRP Stair Nosings into position, but a double fixing method can be used if desired.

Start with Mechanical Only Installation Steps 1-4 instructions then continue with the steps below:

Ensure the step onto which the nosing is being installed is clean, dry and free from grease.
Apply adhesive* to the underside of the GRP stair nosing, running 2-3 beads of adhesive along the length.

Carefully position the stair nosing, making sure it's aligned with the drilled holes and press firmly in to place. Secure with screws ensuring that the screw heads are flush with or below the stair nosing tread surface.

Disclaimer:

These methods of installation make no claim to being comprehensive but should be used as a guide. Always employ safe practices.
A risk assessment and method statement should always be prepared.
If in doubt please contact our Sales Office.

For instructions of how to maintain the installed GRP stair nosings, see the maintenance guide on our website.
